

Equivalent Fractions

Add the fractions. Shade the first fraction blue and the second fraction yellow. Then add the fractions and write the new fraction.

$$\frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{3}{8} + \frac{4}{8} = \frac{7}{8}$$

$$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$$

$$\frac{4}{6} + \frac{1}{6} = \frac{5}{6}$$

$$\frac{1}{2} + \frac{1}{2} = 1$$

$$\frac{2}{8} + \frac{4}{8} = \frac{6}{8}$$

$$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$$

$$\frac{2}{5} + \frac{2}{5} = \frac{4}{5}$$

$$\frac{3}{8} + \frac{1}{8} = \frac{4}{8}$$

$$\frac{2}{6} + \frac{2}{6} = \frac{4}{6}$$

Equivalent Fractions **Answers**

Add the fractions. Shade the first fraction blue and the second fraction yellow. Then add the fractions and write the new fraction.

$$\frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{3}{8} + \frac{4}{8} = \frac{7}{8}$$

$$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$$

$$\frac{4}{6} + \frac{1}{6} = \frac{5}{6}$$

$$\frac{1}{2} + \frac{1}{2} = \frac{2}{2}$$

$$\frac{2}{8} + \frac{4}{8} = \frac{6}{8}$$

$$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$$

$$\frac{2}{5} + \frac{2}{5} = \frac{4}{5}$$

$$\frac{3}{8} + \frac{1}{8} = \frac{4}{8}$$

$$\frac{2}{6} + \frac{2}{6} = \frac{4}{6}$$
