

Summarising

1. Read the text to work out the main idea.

_____ (Title)

Not all animals grow in the same way. Some animals change gradually over time. As they grow, they keep the same general physical structure. Humans are an example of this.

Other animals, however, experience abrupt changes to their body. Frogs for example, hatch from the egg as a tadpole. They grow legs and by the time they are an adult, their body looks completely different. Butterflies grow in different way again. A caterpillar hatches from the egg. Eventually it forms a chrysalis and emerges as a butterfly.

2. What is the main idea of this text?

3. Write an appropriate title on the line above the text.

Summarising **Answers**

1. Read the text to work out the main idea.

Answers will vary (Title)

Not all animals grow in the same way. Some animals change gradually over time. As they grow, they keep the same general physical structure. Humans are an example of this.

Other animals, however, experience abrupt changes to their body. Frogs for example, hatch from the egg as a tadpole.
