Read the following passage about rainforests.

Use the checklist at the bottom of the page to see what is missing.

Layers of a Rainforest

A very large number of plants grow in rainforests

because there is so much sunlight and rainfall.

Rainforests also provide animals with many

places to live. the largest rainforest in the world

is the amazon rainforest.

Rainforests have four main layers. The first layer is the forest floor

Very little sunlight reaches the forest floor and so it is very dark here.

Above the forest floor is the understory. Shrubs bushes and younger trees are

found in this layer the canopy layer is like a roof over the rainforest. it is

home to more life than any of the other layers at the top is the emergent

layer the very tallest of the trees are

found in this layer. The sunlight is very

strong up this high

5 missing full stops
