

## Editing

Read the following passage about African Elephants.

Use the checklist at the bottom of the page to see what is missing.

### African Elephants

the African elephant is the largest land animal in the world. It is thought that the population of african elephants once numbered nearly five million today that number is closer to five hundred thowsand. The actions of humans are too blame for this sharp decline in numbers

poaching is a serious problem for African elephants. Although african elephants are a protected species meaning it is illegal to kill African elephants people make a lot of money from hunting them. These people are called poachers. Poachers work quickly quietly and often in the dark of night the main reason poachers kill elephants is for their tusks the ivory from the tusks are carved into jewellery and ornaments. Their have been efforts to eliminate the ivory trayd and while some of these efforts have helped the poaching problem still persists. African elephants are also targeted four their skin and meat.
