## Multiplication X-Factor!

How to Play:
Player 1 places one marker on a $\mathbf{1}^{\text {st }}$ factor number and one marker on a $\mathbf{2}^{\text {nd }}$ factor number.

Player 1 then finds the product ( x ) of the two factors and places one of their counters over that number on the game board.

Player 2 chooses one of the factor markers to move. Counters may only be moved one square at a time.

Player 2 then finds the product (by multiplying) and places one of their counters on the game board.

Repeat until a player has 4 counters in a row on the game board!

2nd
factor
