

Halving

Addition & Subtraction Strategies

We can use doubles facts to help find half of a number.

If we know double 3 is 6...

$$\text{Double } \underline{\quad} = 6$$

...we know half of 6 is 3

$$\text{Half of } 6 = \underline{\quad}$$

$$\text{Double } \underline{\quad} = 10$$

$$\text{Half of } 10 = \underline{\quad}$$

$$\text{Double } \underline{\quad} = 8$$

$$\text{Half of } 8 = \underline{\quad}$$

Circle half of each collection!

4

$$\text{Half of } 4 = \underline{\quad}$$

12

$$\text{Half of } 12 = \underline{\quad}$$
